Abstracts

An optical fiber movable connector is a connector used to connect optical fibers. It has a rotatable or movable design that allows the position or angle of the optical fiber to be adjusted during connection to better align the connection points between optical fibers. This kind of connector is usually used in situations that require frequent plugging and unplugging or adjustment, such as fiber optic testing, fiber optic network maintenance, etc. Optical fiber movable connectors can provide a more flexible and convenient optical fiber connection method, helping to reduce connection errors and improve connection efficiency.
