According to our (Global Info Research) latest study, the global Optical Frequency Domain Reflectometry market size was valued at US\$ 316 million in 2024 and is forecast to a readjusted size of USD 472 million by 2031 with a CAGR of 6.0% during review period.

Optical frequency domain reflectometry (OFDR) is a specialised technology for analysing optical light paths and reflection characteristics in optical fibres and components. Unlike OTDR, OFDR operates in the frequency domain with continuous wave (CW) light sources, allowing for higher signal-to-noise ratios. A tuneable laser source sweeps over a specific wavelength band in a typical OFDR system (e.g. 1535nm-1565nm). The light is then transmitted through a fibre and interfered with by a reference arm. The spatial distribution of the reflected light is calculated using the Fourier transformation of the resulting signal.

The availability of smart optical frequency domain reflectometers (OFDR) with robust wireless connectivity options is expanding its application in various industries due to the widespread adoption of Internet of Things (IoT) technologies and the increased use of high-end electronic. The growing demand for telecom networks is driving the market growth. Growing focus on 5G network deployment across the globe is expected to further drive the market.
