According to our (Global Info Research) latest study, the global Optical Fruit Sorting Machinery market size was valued at USD 388.3 million in 2023 and is forecast to a readjusted size of USD 558.6 million by 2030 with a CAGR of 5.3% during review period.

Optical fruit sorting machinery is a type of equipment used in the food processing industry to sort and grade fruits based on their size, shape, color, and other quality parameters. The machinery uses optical sensors and image processing technology to scan the fruits and sort them into different categories based on pre-determined criteria.

The optical fruit sorting machinery typically includes a conveyor system that moves the fruits through the sorting process, a lighting system to illuminate the fruits, and multiple high-speed cameras to capture images of the fruits from different angles. The images are then analyzed by software algorithms to determine the quality parameters and sort the fruits into different categories.

Global 5 largest manufacturers of Optical Fruit Sorting Machinery are Unitec, TOMRA, Buhler, ELLIPS and Aweta, which make up about 60%. Among them, Unitec is the leader with about 28% market share.
