## Abstracts

The optical line monitor system combines OTDR, optical switches, and upper-layer network management software to form a centralized optical cable monitoring system that integrates testing, analysis, alarm, positioning, information management, and business reporting functions. It can real-time and automatically monitor the changes in the transmission performance of the optical cable line, discover hidden troubles in time, and quickly and accurately locate the fault point, thereby greatly reducing the failure duration of the optical cable line. At the same time, the system can realize the information management of optical cable line resources, provide accurate basic data for system resources and network construction, and provide a reliable guarantee for scientific decision-making.
