Optical loss test equipment is an instrument specifically used to measure the attenuation of optical signals in optical fibers or optical communication systems. It evaluates the quality of optical fiber links by transmitting optical signals of known intensity into optical fibers and measuring the intensity loss of the signals after transmission through the optical fibers. The equipment can detect possible losses, poor connections, reflections, and other transmission problems in optical fibers, and is widely used in the fields of optical fiber installation, maintenance, troubleshooting, and performance optimization to ensure efficient and stable operation of optical communication systems.
