## Abstracts

According to our (Global Info Research) latest study, the global Optical Mixer market size was valued at US\$ 161 million in 2024 and is forecast to a readjusted size of USD 208 million by 2031 with a CAGR of 3.1% during review period.

An optical mixer is a device that can couple two or more light waves of different frequencies through a nonlinear medium to generate light waves of new frequencies. Specifically, when two or more monochromatic strong lights of different frequencies are incident on a nonlinear medium at the same time, optical sum-frequency and optical difference-frequency light waves are generated through the coupling of the second or higher order nonlinear electric polarization coefficients of the medium.
