According to our (Global Info Research) latest study, the global Optical Motion Capture System market size was valued at US$ 371 million in 2025 and is forecast to a readjusted size of US$ 594 million by 2032 with a CAGR of 7.0% during review period.

Optical motion capture is used in computer game, virtual clothing application and virtual reality. In all optical motion capture systems, it requires in its first step to obtain a full and precise capture of human silhouette and movements from the different point of view provided by the multiple cameras.Optical motion capture can physically see each marker, and detect the slightest of movements with unmatched accuracy. Inertial motion capture lacks absolute positioning.

Rapid technological advancements such as three-dimensional (3D) motion capture are key factors driving market revenue growth. As the number of applications continues to increase, it"s no surprise that the underlying motion capture technology continues to evolve to provide more accurate motion capture at a cheaper price. Additionally, the rapid expansion of the entertainment industry is another factor driving market revenue growth. Animation in the entertainment industry is the most well-known application of motion capture methods.
