According to our (Global Info Research) latest study, the global Optical Oxygen Sensor market size was valued at US\$ 800 million in 2024 and is forecast to a readjusted size of USD 1082 million by 2031 with a CAGR of 4.4% during review period.

An optical oxygen sensor is a device that detects the oxygen concentration in a gas or liquid by optical principles. Its core function is to convert oxygen concentration into quantifiable electrical or optical signal output by using the interaction between oxygen and specific optical signals. This type of sensor does not need to directly contact the measured medium, and has technical advantages such as non-invasiveness, high accuracy and long life. It is widely used in medical, environmental protection and other fields.
