According to our (Global Info Research) latest study, the global Optical Precision Mold market size was valued at US\$ 433 million in 2025 and is forecast to a readjusted size of US\$ 673 million by 2032 with a CAGR of 6.6% during review period.

Optical mold is a type of mold used for processing optical components. It can produce high-precision and high-quality optical components on materials such as glass and plastic through high-precision processing technology. Optical molds not only have the characteristics of high quality and high precision, but also can achieve large-scale and efficient production. Optical precision mold is a mold used for manufacturing high-precision and high transparency optical components. It processes raw materials into specific shapes and sizes, and then injects molten materials (such as glass, plastic, etc.) into molds to solidify and form the desired optical components, such as lenses, prisms, etc. These optical components are widely used in fields such as photography, communication, healthcare, and scientific research. The sales volume of optical precision molds in 2024 will be approximately 5,226 sets, with a price of approximately RMB 551,900 per set.

With the widespread application of optical equipment in the fields of communications, medical treatment, consumer electronics, etc., the requirements for precision of optical molds are getting higher and higher. Especially with the growing demand for miniaturized and integrated equipment, the requirements for mold processing accuracy and surface quality will be further improved. At present, the overall design and manufacturing level of optical precision molds in the Chinese market is still lagging behind that of countries such as Germany, the United States and Japan, and there is still a certain gap in accuracy-related indicators, service life, and yield rate. From the

perspective of product sources, most of the optical precision molds in the Chinese market are self-produced and self-sold. Leading domestic manufacturers have entered the supply chains of companies such as Sunny Optical and Goertek Optics. Although some ultra-precision optical molds rely on imports, overall, the precision optical molds in the Chinese market are in a net export state.
