According to our (Global Info Research) latest study, the global Optical Pumping Magnetometer market size was valued at US\$ 123 million in 2024 and is forecast to a readjusted size of USD 219 million by 2031 with a CAGR of 8.5% during review period.

Optical Pumping Magnetometer is a high-precision magnetic field measuring instrument based on atomic Zeeman splitting effect . It takes advantage of the energy level splitting characteristics of atoms of certain elements (such as rubidium, cesium, helium, etc.) in the external magnetic field. Magnetic field measurement is realized by combining optical pump (which realizes directional arrangement of atomic magnetic moments by irradiation of specific wavelength) and magnetic resonance (which can detect magnetic field intensity by matching Zeeman level difference with radio frequency field). Its core function is to accurately detect the total strength of geomagnetic field or abnormal magnetic field value, which is widely used in geological exploration, biomedical imaging and other fields.
