According to our (Global Info Research) latest study, the global Optical Strain Gauge market size was valued at US\$ 92.12 million in 2025 and is forecast to a readjusted size of US\$ 138 million by 2032 with a CAGR of 6.1% during review period.

Optical strain gauge is a device used to measure the strain on the surface of an object. It uses optical effects to detect the deformation of the surface of the object. Optical strain gauges can be placed on the surface of objects that need to measure strain. When the object is deformed by external forces, it will cause the interference fringes on the optical strain gauge to change. By measuring the changes in the fringes, the surface strain of the object can be calculated. strain.
