According to our (Global Info Research) latest study, the global Optical Telescope market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

A telescope is an instrument that aids in the observation of remote objects by collecting electromagnetic radiation. In this report, we mainly research on the market of astronomical telescope industry. Astronomical telescope consists of two convex lenses: objective and eye piece. The objective is a convex lens of large focal length and large aperture. It usually made of two convex lenses in contact with each other to reduce the chromatic and spherical aberrations. The eye piece is also a convex lens. Its focal length is smaller than that of objective. It is also a combination of two lenses.

Demand for telescope is mainly driven by the development of astronomical research and hobby increasing of scope. Increase on economic investment on astronomical research and the national consumption capacity, as well as the national policies on astronomical education are the main growth catalysts for the market of telescope.
