The Optical Time Domain Reflectometer (OTDR) test service is a widely used test service in the field of fiber optic network maintenance and communications. By sending light pulses and receiving their reflected signals, OTDR can non-destructively detect various parameters of the fiber optic link, providing important support for the maintenance and troubleshooting of the fiber optic network.

The OTDR test service refers to the service of using an optical time domain reflectometer (OTDR) to test the fiber optic link to evaluate the fiber's length, attenuation, connector quality, splice loss and other characteristics. Through OTDR, testers can intuitively see the fault points and performance bottlenecks in the fiber optic link, providing data support for the maintenance and optimization of the fiber optic network.
