## Abstracts

An optical transceiver is also called fiber optic transmitter and receiver. The role of the optical module is photoelectric conversion. The transmitter end takes in and converts the electrical signal into light, after the optical fiber transmission in the fiber cable plant; the receiver end again converts the light signal into electrical signal. Both the receiver and the transmitter ends have their own circuitry and can handle transmissions in both directions.

### Scope of the Report:

This report focuses on the Optical Transceivers in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The optical transceivers industry is a late start but quickly developing industry. It was accompanied by Telecom and Datacom development.

The main components of Optical Transceivers have high technical content. The price of these main components is stable. Due to the high added value of optical transceivers, main components prices had little effect on prices.

From the production side, Major manufacturers are concentrated in the communication technology developed areas. Resources giant vertically integrated industries, which makes them maintain market share. In order to reduce production costs, major producers' factories shifted to lower-cost areas

The worldwide market for Optical Transceivers is expected to grow at a CAGR of roughly 23.5% over the next five years, will reach 15600 million US\$ in 2023, from 4410 million US\$ in 2017, according to a new GIR (Global Info Research) study.
