According to our (Global Info Research) latest study, the global OPO Infant Formula market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

OPO Infant Formula is a specially designed infant formula containing Oleic-Palmitic-Oleic (OPO) fatty acid structure. This milk powder mimics the fatty acid combination present in breast milk by replacing some parts of vegetable oils with OPO fatty acid structures. OPO fatty acids are introduced to help babies better absorb fat, promote intestinal health, and reduce the risk of gas.

OPO Infant Formula is often used in situations where breastfeeding is not feasible to provide infants with a nutrient-dense food while simulating some of the benefits of breast milk, such as ease of digestion and healthy fat absorption. OPO structured fat milk powder undergoes strict formula and quality control to ensure it is suitable for the nutritional needs of infants.
