According to our (Global Info Research) latest study, the global Optical Waveguide Projection Light Machine market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The optical waveguide module includes two important components, the optical waveguide lens and the optical waveguide projection machine. In the optical waveguide display system, the waveguide sheet itself does not have an imaging function. Therefore, the optical waveguide projection optical machine is the most important part of the waveguide display system. An important component, the projection light engine affects the performance of the entire module on the one hand, and at the same time the volume of the projection light engine directly affects the shape and comfort of the module and AR glasses, and its cost is even higher than the waveguide itself.
