## Abstracts

The global Optocoupler market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the Japanese market, the key players in Optocouplers (Optocouplers) are mainly onsemi, Toshiba, Broadcom, OptoPower Technology, Everlight Electronics, ect. The top three companies in the industry hold more than 45% of the Japanese market share. The products can be classified into transistor output type, high-speed type, SCR output type, IGBT/MOSFET and other types according to the product shape. The products are widely used in 3C products, industrial, automotive and other industries.

A photocoupler, also called optocoupler, optical coupler, is a passive optical component that can combine or split transmission data (optical power) from optical fibers. It is an electronic device which is designed to transfer electrical signals by using light waves in order to provide coupling with electrical isolation between its input and output. The main purpose of a photocoupler is to prevent rapidly changing voltages or high voltages on one side of a circuit from distorting transmissions or damaging components on the other side of the circuit.

A photocoupler contains a light source often near an LED which converts electrical input signal into light, a closed optical channel and a photosensor, which detects incoming light and either modulates electric current flowing from an external power supply or generates electric energy directly. The sensor can either be a photoresistor, a silicon-controlled rectifier, a photodiode, a phototransistor or a triac.

This report studies the global Optocoupler production, demand, key manufacturers, and key regions.
