Abstracts

According to our (Global Info Research) latest study, the global Optoelectronic Devices Photomask market size was valued at US$ 962 million in 2025 and is forecast to a readjusted size of US$ 1391 million by 2032 with a CAGR of 5.5% during review period.

Photomasks are important components used in the manufacturing process of integrated circuits such as LSI. A very fine circuit pattern is etched on the light-shielding film on the surface of a transparent glass plate, which becomes the original plate for replicating the circuit on a silicon wafer. The pattern on the photomask is reduced and projected onto a silicon wafer to form a fine pattern.

This article studies photomask products used for optoelectronic devices including light-emitting diodes (LEDs), photodiodes (PINs), avalanche photodiodes (APDs), sensitive devices, and some special discrete devices.

The global photomask market is dominated by companies from Japan, South Korea and Taiwan.The market concentration of optoelectronic device masks is high and oligopoly is serious. Photronics, DNP and Toppan account for more than 80% of the market share.

China's semiconductor industry is accelerating its domestic substitution efforts, and the growth rate of China's photomasks is higher than the global average.

This report is a detailed and comprehensive analysis for global Optoelectronic Devices Photomask market. Both quantitative and qualitative analyses are presented by manufacturers, by region & country, by Type and by Application. As the market is
