Abstracts

According to our (Global Info Research) latest study, the global OR Video Management System market size was valued at US\$ 1045 million in 2025 and is forecast to a readjusted size of US\$ 2453 million by 2032 with a CAGR of 12.9% during review period.

The Operating Room Video Management System (VMS) is the 'visual nerve center' of an integrated operating room. Through a centralized hardware and software platform, it unifies the acquisition, switching, display, recording, and remote transmission of various image sources within the operating room (such as endoscopes, surgical field cameras, panoramic cameras, C-arm machines, etc.).

Upstream includes camera systems, medical displays, encoding and transmission devices, storage systems, network communication modules, and software platforms, spanning video processing, networking, and healthcare IT technologies. The supply chain is relatively mature, but the system requires high stability and low latency performance. Downstream is centered on hospitals, particularly tertiary hospitals, large general hospitals, and specialty institutions, while teaching hospitals and telemedicine centers are experiencing rapid demand growth. From a downstream perspective, demand focuses on enhancing surgical visualization and management efficiency. The system enables centralized control of multiple video sources, full procedure recording, and cross-departmental sharing, improving surgical safety and quality control, while also playing a key role in medical education, case review, and remote consultation. It is increasingly becoming a standard component in hospital digitalization upgrades.

The industry is evolving toward higher resolution, networked, and platform-based

solutions. Systems are transitioning from simple recording tools to comprehensive video management platforms, supporting 4K and higher resolution imaging, low-latency transmission, and multi-terminal access, while integrating deeply with hospital information systems. Key drivers include the advancement of healthcare digitalization, growing demand for telemedicine and medical education, and increasing requirements for refined hospital management. In particular, under multi-site hospital collaboration and healthcare resource sharing initiatives, video systems serve as critical infrastructure. The growing reliance on imaging in minimally invasive surgery further strengthens demand. Constraints include high system deployment and upgrade costs, interoperability challenges among different vendors, and increasing requirements for data security and privacy compliance, while smaller hospitals may have limited investment capacity.

In terms of profitability, operating room video management systems are positioned as mid-to-high value healthcare IT products, typically achieving gross margins in the range of 30% to 50%, with software platforms and system integration contributing a larger share of profits. Standardized hardware faces stronger competition, while companies with comprehensive solution capabilities and ongoing service offerings are better positioned to maintain higher margins. The project-based nature means revenue and profitability depend on hospital size, system complexity, and customization needs, while post-deployment services such as maintenance, upgrades, and data-related services provide recurring income. As healthcare digitalization deepens, profit concentration is gradually shifting toward companies with strong platform and ecosystem integration capabilities.
