Abstracts

The global Oracle Bronto Consulting Service market size is expected to reach \$ 2346 million by 2032, rising at a market growth of 14.2% CAGR during the forecast period (2026-2032).

Oracle Bronto consulting services refer to the professional consulting and technical support services provided around the original Bronto marketing automation and multi-channel email service platform. This specialized product is strictly limited to specific life cycle stages. The core service content includes the compliance cleaning and secure export of historical e-commerce customer data of Bronto, the logical reconfiguration of automated email delivery workflows, the smooth switching of SMS and social media marketing channels, and the overall architecture design and data migration to the new generation cloud marketing platform. The upstream supply is mainly provided by Oracle Company with the read-only data interface of the original Bronto system, the official migration technical roadmap, and the underlying authorization for alternative products; the middle stream consists of professional digital marketing consulting institutions, independent system integrators, and third-party data migration service providers with experience in implementing the original Bronto; the downstream precisely connects with medium-sized and large e-commerce enterprises, retail brand merchants, and multinational online retail channels that are still digesting or undergoing transformation.

Oracle Bronto's consulting services are currently in the final stage of transitioning to a 'comprehensive technology liquidation and architecture renewal' model. The future trends are entirely focused on leveraging automated data mapping tools to achieve lossless transfer of user profiles between heterogeneous platforms, as well as automatic translation and reconfiguration of marketing workflow logic based on artificial intelligence. The core factors driving the development of this specific market at the

current stage mainly stem from the historical crisis of unstructured data assets of consumer behavior that enterprises face in the post-Bronto era, the strict supervision of multiple countries' privacy laws regarding the mandatory destruction or compliance retention of legacy customer data from old systems, the urgent need of e-commerce retailers to maintain full-channel marketing continuity after the shutdown of traditional mail service providers, and the business drive of enterprises to achieve higher marketing return on investment by upgrading modern customer experience cloud.
