Abstracts

The global Oracle CX - Customer Experience Cloud Consulting Service market size is expected to reach \$ 25309 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

Oracle CX Cloud Consulting Services refer to the specialized technical support and business transformation consulting services provided for Oracle's Customer Experience Cloud Suite. This service strictly focuses on reshaping the customer touchpoints of enterprises through cloud-native architecture. The core contents include cross-channel marketing automation design, intelligent transformation of the sales funnel, integration of the omnichannel customer service center, and the construction of a customer data platform based on artificial intelligence. Its upstream supply is mainly provided by Oracle Company with SaaS software subscriptions, OCI cloud infrastructure resources, and underlying AI algorithm models; the middle stream consists of global system integrators, digital marketing consulting companies, and professional implementation institutions with Oracle CX Cloud certification; the downstream connects to end enterprises such as finance, retail, telecommunications, and high-end manufacturing that have deep demands for the entire customer lifecycle management.

Oracle CX cloud consulting services are accelerating their progress towards an intelligent stage characterized by 'generative AI enhancement' and 'ending data silos'. The future market trend is a shift from traditional process automation consulting to predictive interactive consulting based on real-time sentiment analysis, as well as 'all-encompassing profile' decision support built around the customer data platform. The core driving factors for market development mainly stem from enterprises' pursuit of maximum customer retention rates in the context of global competition with existing

resources, the complexity of marketing caused by fragmented digital channels, the compliance data governance pressure imposed by personal privacy protection laws, and the significant performance of AI-driven ultra-personalized services in increasing average order value.
