Abstracts

According to our (Global Info Research) latest study, the global Oral GLP-1 Drug market size was valued at US\$ 1552 million in 2025 and is forecast to a readjusted size of US\$ 3193 million by 2032 with a CAGR of 11.7% during review period.

Oral GLP-1 drugs are tablet-based incretin therapies that activate the GLP-1 receptor to reduce appetite, improve satiety and support long-term weight reduction without injection. Compared with injectable GLP-1 products, oral drugs may expand access among needle-averse patients and primary-care users, but their commercial success depends on efficacy, gastrointestinal tolerability, dosing restrictions, reimbursement and large-scale API/formulation capacity. In 2025, Global oral GLP-1 drug sales were still in an early launch stage, with a gross margin range of 70%?85%. The chain covers peptide or small-molecule API synthesis, absorption-enhancing formulation technology, tablet manufacturing, clinical development, regulatory approval, payer access and chronic obesity-care distribution.

Growth is supported by the large untreated obesity population, patient preference for non-injectable therapy, payer interest in broader but potentially more manageable access models, and pharmaceutical companies' efforts to extend GLP-1 treatment from specialist injection channels into primary care. Oral products also create a new segmentation layer in the obesity market because convenience, food restrictions, price and efficacy can be balanced differently from weekly injections.
