According to our (Global Info Research) latest study, the global Oral Glutathione market size was valued at US\$ 25.9 million in 2024 and is forecast to a readjusted size of USD 43.7 million by 2031 with a CAGR of 7.7% during review period.

Oral Glutathione refers to glutathione supplements taken by mouth to support antioxidant activity, detoxification, and overall cellular health. Glutathione is a naturally occurring tripeptide composed of glutamine, cysteine, and glycine, which plays a critical role in neutralizing free radicals, recycling other antioxidants, and maintaining the immune system. While it is naturally produced in the body, oral supplements are often marketed to boost levels, particularly for skin whitening, anti-aging, and liver health. However, the bioavailability of orally ingested glutathione has been debated, as it may be broken down in the digestive system. Liposomal or acetylated formulations are believed to enhance absorption and efficacy.
