Abstracts

The global Oral Syringes market size is expected to reach \$ 1086 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

An oral syringe is used to dispense liquid medicine into the mouth. It's made up of three main parts: a straw like stopper, the barrel or body and the plunger; some oral syringes also have a cap that fits on the tip of the barrel. An oral syringe has measurement markings on its barrel. It looks almost identical to a hypodermic syringe used to inject medicine under the skin, but uses no needle. Instead, oral syringes have an opening that allows liquid medications to be dispensed into the mouth.

North America is the largest producer of Oral Syringes, with a market share nearly 45%. It was followed by Europe with 35%. Baxter, BD, B. Braun Melsungen AG, Terumo Corporation and Medtronic PLC are the top 5 manufacturers of industry, and they had more than 50% combined market share.

This report studies the global Oral Syringes production, demand, key manufacturers, and key regions.
