According to our (Global Info Research) latest study, the global Orally Disintegrating Drug market size was valued at USD 2013.7 million in 2022 and is forecast to a readjusted size of USD 3702.7 million by 2029 with a CAGR of 9.1% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The orally disintegrating drug market is being driven by several factors. One of the primary drivers is the growing demand for convenient and patient-friendly medication delivery methods. Orally disintegrating drugs offer an advantage over traditional oral tablets as they quickly dissolve in the mouth without the need for water, making them easier to administer, particularly for individuals with swallowing difficulties, pediatric patients, and the elderly. Additionally, the increasing prevalence of chronic diseases and the need for efficient and immediate drug absorption have fueled the demand for orally disintegrating drugs. Furthermore, advancements in formulation technologies and taste-masking techniques have improved the palatability of these drugs, enhancing patient compliance. Overall, the demand for orally disintegrating drugs is driven by the need for convenience, improved patient experience, and enhanced drug delivery options in the pharmaceutical market.

An orally disintegrating tablet or orally dissolving tablet (ODT) is a drug dosage form available for a limited range of over-the-counter (OTC) and prescription medications. ODTs differ from traditional tablets in that they are designed to be dissolved on the tongue rather than swallowed whole. The ODT serves as an alternative dosage form for patients who experience dysphagia (difficulty in swallowing) or for where compliance is a known issue and therefore an easier dosage form to take ensures that medication is

taken.
