The global Orbital Debris Removal Service market size is expected to reach \$ 2895 million by 2032, rising at a market growth of 5.8% CAGR during the forecast period (2026-2032).

Orbital Debris Removal Service is a specialized space service aimed at detecting, capturing, and safely removing debris from Earth's orbit, including defunct satellites, spent rocket stages, and fragments from collisions. These services are designed to mitigate the growing risks of space congestion, reduce the chance of collisions with operational satellites, and ensure the long-term sustainability of space operations. Technologies involved may include robotic arms, nets, harpoons, lasers, and drag-enhancement devices, often combined with sophisticated tracking and guidance systems to precisely target and deorbit debris. The service is increasingly critical as the number of satellites and orbital objects rises, especially with the growth of mega-constellations and commercial space activities.

The Orbital Debris Removal Service market is rapidly emerging as a critical segment within the commercial and governmental space industry. Driven by the proliferation of satellites, particularly large mega-constellations, and the increasing awareness of space sustainability, the market includes both government contracts and private commercial ventures offering debris mitigation, active removal, and on-orbit servicing. Market growth is supported by advancements in robotics, AI guidance systems, and novel deorbiting technologies, with investment coming from national space agencies, private aerospace companies, and international consortia. Analysts expect strong growth over the next decade, with revenues driven by contracts for debris tracking, removal missions, insurance-mandated compliance services, and international space sustainability initiatives.
