## Abstracts

According to our (Global Info Research) latest study, the global Orbital Reciprocating Saws market size was valued at US\$ 797 million in 2024 and is forecast to a readjusted size of USD 985 million by 2031 with a CAGR of 3.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The orbital reciprocating saw is an electric cutting tool and an enhanced structure of the reciprocating saw. Its core feature is that on the basis of the traditional forward and backward linear reciprocating motion, it adds a 'orbital' elliptical path of the saw blade motion trajectory, so that the saw blade moves slightly upward or outward in an arc when moving forward, forming a more aggressive and efficient cutting action. This structure is particularly suitable for fast rough cutting of materials such as wood, plastic and light metal, and its efficiency is much higher than that of a linear reciprocating saw; but in cutting scenarios that require precision, it may not be as clean as the linear mode. Most orbital reciprocating saws support orbital mode switch adjustment. Users can switch whether to turn on the orbital action according to the type of material, taking into account both efficiency and controllability. It is widely used in building demolition, decoration, electrical pipe grooving, gardening pruning and other fields.
