Abstracts

Cheese is a food derived from milk that is produced in a wide range of flavors, textures, and forms by coagulation of the milk protein Casein. Cheese powder is essentially dehydrated cheese. Cheese powders are a substitute for hard cheese due to their convenience in handling, shelf stability, and storage. Manufacturers get a better value by using high flavored cheese that makes much more flavorful cheese powder. Cheese powder can be marketed as reduced-fat or reduced-sodium by using low-fat and low-salt cheese as the cheese ingredient. An average American consumer eats around 23 pounds of cheese per year as per the New Yorker.
