Abstracts

Organic cotton is an ecologically responsible and green fiber. Unlike conventional cotton, which uses more chemicals than any other crop, it is never genetically modified and does not use any highly polluting agro-chemicals such as those found in pesticides, herbicides and many fertilizers. Integrated soil and pest management techniques such as crop rotation and introducing natural predators of cotton pests are practiced in organic cotton cultivation.

SCOPE OF THE REPORT:

Organic agriculture (food and fiber) protects the health of people and the planet by reducing the overall exposure to toxic chemicals from synthetic pesticides that can end up in the ground, air, water and food supply, and that are associated with health consequences, from asthma to cancer. Because organic agriculture doesn't use toxic pesticides, choosing organic products is an easy way to help protect the environment and yourself.
