Abstracts

The global Organic Dried Blueberries market size is expected to reach \$ 1925 million by 2032, rising at a market growth of 7.1% CAGR during the forecast period (2026-2032).

In 2025, global sales of organic dried blueberries reached 186,000 metric tons, with an average selling price of \$6,200 per ton. Total global production capacity stands at approximately 220,000 tons per year, and the industry's average gross profit margin is around 28%. Produced from certified organic blueberries through processes such as washing, sorting, and low-temperature or freeze-drying, these natural dried fruit products are free from chemical pesticides, synthetic additives, and preservatives. They maximize the retention of anthocyanins, dietary fiber, and bioactive polyphenols found in blueberries. Classified as a high-value-added health food and functional snack, they are widely used in sectors including snack foods, baking ingredients, nutritional supplements, and health food formulations.

Upstream inputs primarily include fresh organic blueberries, organic fertilizers, biological pest control agents, and processing aids, while downstream distribution encompasses health food brands, snack companies, bakery manufacturers, functional beverage and nutritional product makers, as well as cross-border e-commerce and high-end retail channels. Future growth prospects lie in the development of functional food fortification, the replacement of traditional snacks with low-sugar healthy alternatives, and the branding of high-end organic products. Demand growth is driven by the strengthening trend of healthy eating, the widespread adoption of organic certification, and the premiumization of the global snack market; key business opportunities are concentrated in high-anthocyanin retention processing technologies, the development of sugar-free or low-additive products, and expansion into functional health food market segments.
