## Abstracts

The global Organic Electrolyte Powder market size is expected to reach \$ 1609 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Organic electrolyte powder in the food and beverage industry refers to edible electrolyte salt-based powdered formulations used to replenish electrolytes and maintain fluid balance. It provides essential ions such as Na<sup>+</sup>, K<sup>+</sup>, Ca<sup>2+</sup>, and Mg<sup>2+</sup> for hydration and neuromuscular function.

Common ingredients include sodium chloride, potassium chloride, sodium citrate, potassium citrate, calcium lactate, and magnesium gluconate, often blended with glucose, sugars, vitamins, natural flavors, or functional extracts. Key technologies focus on solubility enhancement, taste masking, mineral stability, moisture resistance, and anti-caking performance.

Upstream suppliers provide food-grade mineral salts and functional additives, while downstream customers include functional beverage brands, sports nutrition companies, electrolyte drink manufacturers, and dietary supplement firms. Industry gross margins typically range from 30% to 55%, driven largely by branding and functional positioning.

In 2025, the global production of organic electrolyte powder was 32,600 tons, with an average price of US\$35 per kilogram.

This report studies the global Organic Electrolyte Powder production, demand, key manufacturers, and key regions.
