According to our (Global Info Research) latest study, the global Organic Feed Additives market size was valued at USD 12590 million in 2023 and is forecast to a readjusted size of USD 15240 million by 2030 with a CAGR of 2.8% during review period.

A feed additive is a food supplement for farm animals that cannot get enough nutrients from regular meals. Such additives include vitamins, amino acids, fatty acids, and minerals. In some cases, if an animal does not have some specific nutrition in its diet, it may not grow properly. The nutritional values of animal feeds are influenced not only by their nutrient content, but also by many other factors. These include feed presentation, hygiene, digestibility, and effect on intestinal health. Even with all of the benefits of higher quality feed, most of a farm animal's diet still consists of maize, wheat, and soybean meal because of the higher costs of quality feed.

According to our Fee Research Center, in 2022, global total production of feed was about 1.2 billion tons. Key producing regions are Asia, Europe and North America, top ten countries hold about 65% of global feed production. China, United States, Brazil and India, as the top four countries, accounted for half of the total feed production.
