Abstracts

According to our (Global Info Research) latest study, the global Organic Fluorides market size was valued at USD 812.9 million in 2023 and is forecast to a readjusted size of USD 1156.6 million by 2030 with a CAGR of 5.2% during review period.

Fluorocarbons, sometimes referred to as perfluorocarbons or PFCs, are organofluorine compounds with the formula C_xF_y , i.e., they contain only carbon and fluorine. Compounds with the prefix perfluoro- are hydrocarbons, including those with heteroatoms, wherein all C-H bonds have been replaced by C-F bonds.

In the past few years, the price of Organic Fluorides shown a fluctuation trend and we expect the price may keep the trend in a short period. However, as the improvement of energy, transportation costs, employee wages, and equipment depreciation will play a significant role in promoting the cost of Fluorocarbon Gas. Also, with more and more players enter into Fluorocarbon Gas market, Fluorocarbon Gas manufacturers may have to drop the price to keep the competitive strength. Therefore, to some extent, the companies are facing a risk of profit decline. In order to keep profit, the price may keep the trend or decrease relatively slightly in a short period.
