## Abstracts

According to our (Global Info Research) latest study, the global Organic Germanium (Ge-132) market size was valued at US\$ 6.83 million in 2025 and is forecast to a readjusted size of US\$ 10.76 million by 2032 with a CAGR of 6.8% during review period.

Organic Germanium (Ge-132), formally known as Carboxyethylgermanium Sesquioxide, is also referred to as Bis-carboxyethyl Germanium Sesquioxide or Germanium Sesquioxide. Its chemical formula is  $(\text{GeCH}_2\text{CH}_2\text{COOH})_2\text{O}$ , with CAS number 12758-40-6. Ge-132 is a water-soluble organic germanium compound that has been widely studied for its potential immune-modulating, antioxidant, and antiviral properties. Compared to inorganic germanium, Ge-132 has lower toxicity and can be efficiently metabolized and excreted by the human body. The Organic Germanium (Ge-132) investigated in this article is a compound obtained by scientifically synthesizing inorganic germanium.

Organic Germanium (Ge-132) has gained widespread attention since the late 1980s, particularly in Japan, due to its functional properties. Its biological activities, such as immune regulation, anti-tumor, anti-ulcer, and anti-aging effects, have led to its extensive applications in the food, healthcare, and pharmaceutical industries. In recent years, China has made significant progress in the synthesis and application of Organic Germanium, with domestic production capacity steadily increasing and some enterprises playing a key role in the international market. However, the technology for separating and detecting organic and inorganic germanium remains relatively underdeveloped. Quality control is crucial, especially in monitoring and minimizing the content of toxic germanium dioxide.

Currently, China has become one of the world's largest producers and exporters of germanium products, with Organic Germanium being a key category. Beyond its traditional applications in medicine and health-related products, the use of Organic Germanium has expanded into fine chemicals, household products, and cosmetics. This trend is driven by the growing global consumer market and the increasing demand for new material applications. As a result, companies are continuously improving their production processes to meet the needs of various industries.

Looking ahead, the Organic Germanium market is expected to maintain steady growth, primarily driven by ongoing research and the diversification of its applications. Countries such as Japan, Korea, and the United States have already established mature markets for Ge-132, while China is poised to further strengthen its position through strong production capabilities and technological advancements. However, long-term market development may still be influenced by factors such as quality control, production process optimization, and regulatory policies. With continuous technological advancements and deeper industry integration, Organic Germanium is expected to achieve broader market prospects across multiple sectors.
