Abstracts

According to our (Global Info Research) latest study, the global Organic Green Banana Powder market size was valued at US\$ 428 million in 2025 and is forecast to a readjusted size of US\$ 639 million by 2032 with a CAGR of 6.0% during review period.

In 2025, global production of organic green banana powder reached 11,240 tons, with an average selling price of US\$37/kg. Organic green banana powder refers to certified organic powder made from unripe green bananas through washing, peeling (or with peel depending on size), slicing, low-temperature/hot-air drying, and pulverizing and sieving. Its core component, resistant starch (RS2 type), is high in content, while retaining the vitamins (such as vitamin B6 and vitamin C), minerals (potassium and magnesium), and dietary fiber found in bananas. It has a higher proportion of resistant starch and dietary fiber, and is mainly used in health foods and functional ingredients (meal replacement powders, shakes, baking and gluten-free formulas, thickening and stabilizing agents, gut health formulas), infant/special diets and some nutritional supplements, and the feed industry. The upstream of the industry chain includes organic banana planting and certification, raw material procurement (long-term agreements with organic farms), and primary processing (washing, slicing, and drying equipment); the midstream involves powder processing and manufacturing; and the downstream includes food manufacturers, health product companies, and feed producers. The industry's gross profit margin is 30%–50%.
