Organic Industrial Cleaning Solvent refers to organic chemical solvents used to remove oil, grease, flux, resin, dust, and process residues from industrial parts and surfaces. It is widely used in metal processing, electronics, machinery, automotive, and maintenance operations where cleaning efficiency and material compatibility are important.

The industrial chain includes upstream petrochemical solvents, alcohols, esters, hydrocarbons, additives, surfactants, and packaging materials. Midstream covers formulation, blending, filtration, filling, and quality inspection. Downstream applications mainly include metal degreasing, electronics cleaning, machinery maintenance, automotive components, industrial equipment cleaning, and MRO services.

Strict industrial environmental protection regulations and equipment maintenance upgrading needs promote the innovation and replacement of organic industrial cleaning

solvents. Products focus on high cleaning efficiency, low volatility and low toxicity to adapt to precision machinery, electronic manufacturing and chemical industry scenarios. Green formula research and recyclable utilization technology have become the mainstream development trend of the industry.
