According to our (Global Info Research) latest study, the global Organic Infant Formula Milk Powder market size was valued at US\$ 3091 million in 2024 and is forecast to a readjusted size of USD 5074 million by 2031 with a CAGR of 7.4% during review period.

Organic infant formula is a specially formulated food product designed for babies, typically from birth to 12 months of age, made using organic ingredients that adhere to strict agricultural and production standards. Organic infant formula is created to replicate the nutritional content of breast milk as closely as possible while adhering to the guidelines that define organic farming and manufacturing processes.

The organic certification ensures that the ingredients used in the formula are free from synthetic chemicals, pesticides, and fertilizers, and that the animals producing any dairy components are raised according to organic standards (e.g., no antibiotics or growth hormones, fed organic feed, and have access to pasture).

Organic formulas are made using ingredients that comply with organic agricultural standards set by certifying bodies like USDA (United States Department of Agriculture) or the European Union. This means the farming methods used avoid synthetic fertilizers, pesticides, and genetically modified organisms (GMOs). These standards typically also mandate that animals providing dairy ingredients must be raised humanely and fed an organic diet.

The organic infant formula market has seen significant growth over the past decade, driven by rising health consciousness among parents. Increasing concerns about the chemicals and pesticides in conventional food products have led many parents to seek

organic alternatives for their babies.

At present, the major manufacturers of organic infant formula are Abbott, HiPP, Holle, Bellamy, Topfer, etc. Abbott is the world leader, holding about 20% consumption market share. North America and Europe are the main markets for organic infant formula, thanks to consumer awareness and regulatory support for organic products. The Asia-Pacific market is changing significantly, with rapid urbanization, growing disposable income and increasing health awareness driving demand for premium organic infant formula in countries such as China and India.
