## Abstracts

According to our (Global Info Research) latest study, the global Organic Photovoltaic Devices market size was valued at USD 237.7 million in 2022 and is forecast to a readjusted size of USD 518 million by 2029 with a CAGR of 11.8% during review period.

Organic photovoltaic devices are a type of solar photovoltaic technology that utilises organic semiconductor materials. Unlike conventional silicon-based solar cells, organic photovoltaic devices use organic (carbon-based) semiconductor materials, typically polymers or small molecule organic compounds, to capture and convert energy from sunlight.

Organic photovoltaic technology is constantly being innovated and improved. Researchers and manufacturers work to improve the efficiency, stability and cost-effectiveness of organic solar cells to make them more competitive. With the increasing demand for renewable energy and solar energy as one of the key components of clean energy, organic photovoltaic devices are gaining attention. Consumer and business interest in low carbon and sustainable energy is driving the market demand for organic PV. The application areas of organic photovoltaic devices are expanding to include building integration, portable electronic devices, outdoor use, and others. This diverse range of applications is helping to drive the market growth. Cost of organic photovoltaic technology remains a key issue. As the technology matures and scale effects are realised, the cost of organic photovoltaic devices is expected to decline further, making them more attractive.
