Organic pigments for printing inks are organic compounds used for coloring in the printing process. These pigments typically offer vibrant colors, excellent light stability, and durability, allowing printed materials to retain their bright hues over time. They are widely used in various types of printing inks, including those for newspapers, magazines, and packaging. Due to their environmental benefits and excellent color coverage, organic pigments have increasingly replaced traditional inorganic pigments in modern printing. Common organic pigments include aniline blue, aceto red, and phthalocyanine blue, all of which typically have high dispersibility, improving print quality.
