Organotin compounds for stabilising PVC have been in commercial use for over 40 years and the commercial products currently available are well proven in their respective applications. Organic stabilizers, although still small in number, are expected to have a high market potential. Nevertheless, they will have to undergo the same evolution process as any other technology and prove their technical competitiveness and superior sustainability profile. Being relatively new to the market, organic stabilizers are high priced. However, with the introduction of a variety of products and economy of scale, prices will become more competitive. Lead stabilizers, the biggest market and organic stabilizers, the fastest-growing markets among various types of stabilizers used for various applications.
