Abstracts

According to our (Global Info Research) latest study, the global Organic Scintillators market size was valued at USD 126.1 million in 2023 and is forecast to a readjusted size of USD 166.2 million by 2030 with a CAGR of 4.0% during review period.

Organic scintillators are aromatic hydrocarbon compounds which contain benzene ring structures interlinked in various ways. Their luminescence typically decays within a few nanoseconds.

Some organic scintillators are pure crystals. The most common types are anthracene (C₁₄H₁₀, decay time ~30 ns), stilbene (C₁₄H₁₂, 4.5 ns decay time), and naphthalene (C₁₀H₈, few ns decay time). They are very durable, but their response is anisotropic (which spoils energy resolution when the source is not collimated), and they cannot be easily machined, nor can they be grown in large sizes; hence they are not very often used.

The Global Info Research report includes an overview of the development of the Organic Scintillators industry chain, the market status of Radiation Detection (Organic Crystals, Organic Liquids), Medical Imaging (Organic Crystals, Organic Liquids), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Organic Scintillators.
