Abstracts

The global Organic Solvent (MEK, MIBK, IPA) market size is expected to reach \$ 2296 million by 2032, rising at a market growth of 5.9% CAGR during the forecast period (2026-2032).

Organic Solvent (MEK, MIBK, IPA) refers to a group of organic chemical liquids used to dissolve, dilute, clean, extract, or carry other materials in industrial and commercial processes. In this group, MEK, MIBK, and IPA are three common solvent products, but their chemical properties and end uses are different.

MEK is a fast-evaporating ketone solvent with strong dissolving ability. It is mainly used in paints, coatings, printing inks, adhesives, synthetic leather, cleaning agents, and resin processing. Because it evaporates quickly and dissolves many polymers and resins, it is useful in applications where fast drying and strong solvency are required.

MIBK is also a ketone solvent, but it evaporates more slowly than MEK and has lower water solubility. It is commonly used in coatings, lacquers, varnishes, rubber chemicals, extraction processes, adhesives and specialty chemical production. Compared with MEK, MIBK is often selected when a formulation needs better flow, slower drying, or stronger organic-phase extraction performance.

IPA is an alcohol solvent and is widely used for cleaning, degreasing, disinfection, electronics cleaning, pharmaceutical processing, cosmetics, inks and coatings. Compared with MEK and MIBK, IPA is more common in medical, electronics, laboratory and consumer-related applications because it evaporates quickly, mixes well with water, and leaves little residue.

In 2025, global Organic Solvent (MEK, MIBK, IPA) sales volume reached approximately 1.37 million tons, with an average price of approximately US\$ 1100 per ton.
