Abstracts

According to our (Global Info Research) latest study, the global Organic Soymeal market size was valued at USD 365.8 million in 2023 and is forecast to a readjusted size of USD 702.1 million by 2030 with a CAGR of 9.8% during review period.

Soybean meal is used in food and animal feeds, principally as a protein supplement, but also as a source of metabolizable energy. Some, but not all, soybean meal is produced from the residue left after oil extraction. Removal of the oil, which is used mostly in food, but also for industrial oils, soaps and biodiesel, involves crushing and either pressing or solvent extraction. Some, but not all, soybean meal contains ground soybean hulls. Soybean meal is heat-treated during production, to denature the trypsin inhibitors of soybeans, which would otherwise interfere with protein digestion.

High nutritional value of organic soymeal and major application as a protein supplement due to high protein content is likely to drive the global organic soymeal market over the forecast period. Additionally, high demand for defatted soybean meal is anticipated to further propel the growth of soybean meal market.
