Abstracts

According to our (Global Info Research) latest study, the global Organic Sulfur Heavy Metal Scavenger market size was valued at US\$ 391 million in 2025 and is forecast to a readjusted size of US\$ 591 million by 2032 with a CAGR of 6.2% during review period.

Organic Sulfur Heavy Metal Scavengers are functional water treatment agents centered on sulfur-containing organic functional groups. They achieve the removal of heavy metals from wastewater by enabling sulfur atoms to form sparingly soluble complexes or precipitates with heavy metal ions such as copper, nickel, zinc, cadmium, lead, mercury, and silver.

The upstream sector primarily comprises cyanuric chloride or triazine-based intermediates, sodium sulfide, sodium hydrosulfide, carbon disulfide, amines, and polyamines; the specific combination of these raw materials determines the type of product manufactured. Midstream enterprises produce liquid or solid agents through processes involving sulfidation, substitution, polymerization, compounding, dilution, and stabilization; typically, bench-scale tests and dosage optimization are conducted based on the specific quality of the wastewater. Downstream applications focus primarily on the advanced removal of heavy metals from wastewater containing complexing agents, high salinity, multiple metal species, or subject to stringent discharge limits.

In 2025, the price for DTC-type products is projected to range from approximately \$700 to \$1,100 per ton, representing the dominant segment in terms of sales volume; TMT-type products may command prices exceeding \$5,000 per ton, while the industry's gross profit margin is expected to range between 25% and 45%.
