The global Organic Tritium Carbon Oxidation Furnace market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The organic tritium carbon oxidation furnace uses catalyst-assisted combustion technology and is suitable for capturing carbon-14 and tritium combined with organic matter in 'living water' and 'fixed objects' (concrete, steel or graphite). Catalysts are used to ensure that all thermal decomposition products are combusted, and finally the carbon-14 and tritium content is determined by liquid scintillation.
