According to our (Global Info Research) latest study, the global Organic Water-soluble Architectural Coating market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Water-soluble coatings are coatings with water-soluble resins as the base material and water as the solvent. The resin has a low molecular weight and is highly hydrophilic. It can react with hydrophilic groups by its own reaction groups or by adding a curing agent. Water-soluble paints can be divided into drying and room temperature drying types according to the type of drying. Because they do not contain organic solvents, they are safe for construction and are not harmful to humans. However, its performance is poorer than that of solvent-based paints. The most successful water-soluble paint is electrophoretic paint, which is widely used in the overall painting of cars and has reached the level of no rust corrosion in 5 years and no perforation corrosion in 10 years.
