According to our (Global Info Research) latest study, the global Organoclay Rheology Modifier market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Organoclay rheology modifiers are highly effective in waterborne systems by themselves and can assist suspension, improve brushing and leveling, and improve hiding power. Through surface modification, its derivatives can be compatible with the solvent system, and can effectively thicken and stabilize solvent-based coatings progressively. Organoclays are micelles composed of thin-layer aggregates, which can be added to coating materials as powders, such as dispersed with pigments, or pre-dispersed into pastes by high-shear stirring. It is generally necessary to add a polar solvent as an accelerator for the dispersion process.
