Cross-linking accelerator is a kind of auxiliary agent that improves the rate of cross-linking reaction

According to our (Global Info Research) latest study, the global Organometallic Crosslinking Accelerators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The cross-linking accelerator refers to a substance that can shorten the cross-linking time and reduce the cross-linking temperature when added to the rubber compound. The addition of the accelerator can activate the vulcanizing agent, thereby accelerating the cross-linking reaction between the vulcanizing agent and the material molecules.
