According to our (Global Info Research) latest study, the global Organophosphorus Compounds market size was valued at US\$ 1592 million in 2024 and is forecast to a readjusted size of USD 2065 million by 2031 with a CAGR of 4.1% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Organophosphorus compounds refer to compounds that contain carbon-phosphorus (C-P) bonds in their molecular structures or that are connected to organic groups by other atoms (such as oxygen, nitrogen, etc.). They are of various types and properties and are an important branch of organic chemistry. These compounds can be synthesized through a variety of chemical reactions, and because phosphorus atoms have a variety of valence states (such as +3, +5, etc.) and rich coordination capabilities, organophosphorus compounds exhibit unique chemical and physical properties and are widely used in many fields.
