Organopolysilazane is a type of compound that combines organic groups with silicon and nitrogen atoms in its structure. It is a class of silicon-containing polymers or preceramic materials that have a unique combination of properties, making them useful in various applications, particularly in advanced materials and ceramic technologies.

Organopolysilazanes are essential precursors for the production of advanced ceramics, such as silicon carbide and silicon nitride. As industries like aerospace, electronics, and automotive continue to seek high-performance materials with excellent mechanical and thermal properties, the demand for organopolysilazanes as ceramic precursors may increase.
